1.The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 70-76 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shannon in view of Sorensen (see abstract and Fig. 3).

Shannon discloses a container making process wherein web 46 is heat sealed via a lamination nip to web 10/12 containing receptacles 40, these being a plurality of first elements. At the exit of the process shown in Fig. 1 of Shannon, two webs are fixedly sealed together—ie, laminated—via a lamination nip to form a laminate structure wherein one web has a plurality of first elements. Essentially, the primary reference fails to disclose that the second web has a plurality of second elements that are alignable with the first elements. Sorensen discloses a container making process wherein a web 18 (similar to the second web of Shannon) has a plurality of elements (labels 19) which must be aligned to the containers 12 (similar to the first web of Shannon). It is well known in the art to provide labels on containers and it is submitted that one of ordinary skill would have found it obvious to have employed the labeled web of Sorensen as the web 46 in the primary reference to provide a labeled container. The combination would have yielded the plurality of first elements (receptacles 40 in Shannon) being alignable with the plurality of second elements (labels 19 in Sorensen).

2.Claims 77-80 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shannon in view of Sorensen and Anderson III et al (see 18, 44 and 75 in Figs. 4 and

Art Unit: 1791

5), the references being applied for reasons of record as set forth in paragraph 1 supra and paragraph 4 of the last office action.

3.Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection. In view of the amendment, new art has been applied which renders the aspect of aligning first and second elements on first and second webs, respectively, as obvious. The combination of Shannon and Sorensen would produce a laminate container made by the instant process steps and hence the instant claims are submitted to be obvious over the art as now applied.

4.Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
